* Sorter is a light, easy-to-use utility that provides a simple way for a user to sort through large data sets. Sorter's simplistic interface allows the user to sort the data as quickly as possible while maintaining the ability to re-order the data within the file. In the event that the user wishes to sort the data, Sorter provides the user with the flexibility to sort the data in FASTA, tab, or other common sequence formats such as GenBank. The output directory of the Sorter can be specified if desired. In terms of installing Sorter you can

get the source from this site or install from source as described in the Sorter readme file. After you download the.zip file containing the Sorter source and check the readme file, you need to make a symbolic link from the dir/lib-old to the dir/lib-new: `ln -s /path/to/my/dir/lib-old /path/to/my/dir/lib-new` Next you have to setup the `include_dirs` environment variable so that we can include the other necessary files. Assuming you download Sorter into `src` directory, do this: `export include_dirs=src/dir/where/your/other/libs/are/` Then type this command: `export LD_LIBRARY_PATH=$LD_LIBRARY_PATH:$include_dirs` Now you can import Sorter like this: `source include_dirs ./src/Sorter` Once you run this command, Sorter will be ready to sort your files. 1. Field of the Invention The present invention relates to an object oriented modular high-speed logic design, and more particularly, to a method and a device for allowing a logic design to reuse an existing base or library, and for achieving an enhanced logic design by extending the base and using the base as a common module.
2. Description of Related Art In modern electronic product, it is a very common practice for a module to be reused in different designs according to its different purposes. Modules can be reused to save storage capacity of the product and to reduce designing time. For example, for a tape storage library, if a mechanical motion module is reused as a motor module, the storage capacity can be saved by
